

# PROVIDING HIGH-QUALITY DATA FOR INFORMED DECISION-MAKING

Oncology research is more complex than ever, so research teams need solutions that can simplify participation as well as study conduct. Signant's unrivaled oncology expertise and innovative SmartSignals™ technology help clinical researchers generate the evidence needed to deliver novel therapies and treatments.

## SOLVE ONCOLOGY RESEARCH CHALLENGES

Designed with oncology challenges in mind, our SmartSignals solutions can be implemented individually or together for a fully digital experience.

### COMMON ONCOLOGY CHALLENGES INCLUDE:

- Complexity from multiple cohorts, diverse tumor types, and scattered sites.
- Patients experiencing debilitating symptoms.
- Expensive medications that need to be delivered on time to the right patients.

#### SENSORS & WEARABLES

When integrated with our eCOA solution, these wearable devices stream real-time, objective data on sleep and activity patterns. Your study team will gain a better understanding of the post-treatment recovery associated with each treatment cycle.

#### PRE-CONFIGURED eCOA

We created a pre-configured eCOA solution that incorporates pre-validated library instruments and oncology-specific features. Eliminating the issues common in paper administration, our eCOA collects accurate data in a fraction of the time and at a reduced cost.

#### RTSM

Randomization and Trial Supply Management (RTSM) uses proprietary algorithms to optimize expensive oncology supplies even in the most complex study design. The solution can help you maintain the study's blind and protect patients' privacy.

#### PATIENT CONCIERGE

Conveniently located on the same app as our eCOA solution, this engagement tool promotes site-patient communication throughout the study, not just during acute treatment and post-treatment follow up. Built-in reminders, visit schedules, and disease-specific information will drive completion adherence.

#### eCONSENT

Capture a fully informed consent at home or on site by educating patients through multimedia and allowing them to flag sections they need clarified. The solution ensures that patients sign the correct forms after protocol amendments to limit the risk of inspection findings.

### WHO IS SIGNANT HEALTH?

Signant Health, the leader in clinical evidence generation, focuses on leveraging industry-leading software, deep therapeutic and scientific knowledge, and global operational expertise to consistently generate accurate, regulatory-compliant evidence for clinical studies across traditional, virtual, and hybrid trial models.
